

### In the Specification

Applicants propose replacing the specification with the enclosed substitute specification. A marked-up copy of the specification showing the changes being made is also enclosed. No new matter has been added.

- A) Continuing data has been added to the first line of page 1 of the specification.

Applicant's are claiming the benefit, under 35 USC 120 as a continuation-in-part application, of the filing date of application serial no. 09/330,879 (now U.S. Patent 6,321,740) filed on June 11, 1999. Based upon the filing date of the present application, the time limit provisions of 37 CFR 1.78 do not apply. Therefore, this change does not introduce new matter.

- B) Starting on page 3 and continuing throughout the specification, the word "protrusions" has been replaced with "projections".

The original specification used the terms "projections" and "protrusions". For example, see page 2, lines 18 and 23 (which use "projections") and page 3, lines 23 and 26 (which use "protrusions"). This change provides consistent terminology throughout the specification, and is supported by the original disclosure, for example page 2, line 18.

- C) On page 7, reference numerals 46a, 46b, 46a', 46b' and 47 have been added.

These changes provide consistency with the changes made to Figures 5 and 7.

- D) Starting on page 8, reference numerals 12, 14, 22 and 24 have been changed to 12', 14', 22' and 24'.

These changes provide consistency with the changes made to Figures 8-11.

- E) In addition, numerous changes have been made at various points in the specification to correct grammatical errors and to improve the form of the description. As the changes are to matters of form, no new matter is being introduced.
